

Team Name: sdmay21-20

Team Members: Eli Davidson, Andrew Jacobson, Nikhil Sharma, Wyatt Syhlman

Report Period: Oct 5 - Oct 18

Summary of Progress in this Period

We travelled to Stellar Industries in Garner to observe the crane's function and get a firsthand view of what was required of us. While meeting, the problem was narrowed down to specifically working on developing a rotational sensor. This sensor should, in addition, not be hard to install to pre-existing cranes.

We also have started the task of ideating and developing initial ideas that might meet our specified requirements.

Pending Issues

Meeting to finish brainstorming and determine initial solutions that will be the best area of pursuit.

Plans for Upcoming Reporting Period

Meet to discuss ideas on new designs for rotational sensors and determine which kinds of sensors are feasible and meet requirements.
